Inventor: Kiyotaka MOTEKI

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Original): In an image forming system comprising a plurality of image

forming apparatuses, said plurality of image forming apparatuses each comprising:

reading means for reading a document;

printing means for printing an image read by said reading means;

joint operation means for transferring the image read by said reading means to another

image forming apparatus and causing said another image forming apparatus to print said

image;

joint copy mode selecting means for commanding said joint operation means to

execute a joint copy mode operation;

registering means for allowing an operator to register a user stamp to be combined

with the image read by said reading means in the event of printing;

combining means for combining the user stamp and the image read by said reading

means; and

decision means for determining whether or not the user stamp is registered at the

another image forming apparatus to which said joint operation means has transferred the

image;

wherein when the joint copy mode operation is selected and if the user stamp is

registered at the another image forming apparatus, as determined by said decision means, said

joint operation means executes the joint copy mode operation.

Claim 2 (Original) The system as claimed in claim 1, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

Inventor: Kiyotaka MOTEKI

forming apparatus, as determined by said decision means, said joint copy mode selecting

means determines whether or not to execute the joint copy mode operation.

Claim 3 (Original) The system as claimed in claim 1, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

forming apparatus, as determined by said decision means, said joint operation means transfers

the user stamp to the another image forming apparatus and then executes the joint copy mode

operation.

Claim 4 (Original) The system as claimed in claim 3, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

forming apparatus, as determined by said decision means, said joint copy mode selecting

means determines whether or not to execute the joint copy mode operation.

Claim 5 (Original) The system as claimed in claim 3, wherein the another image

forming apparatus deletes the user stamp transferred thereto on completing the joint copy

mode operation.

Claim 6 (Original) The system as claimed in claim 5, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

forming apparatus, as determined by said decision means, said joint copy mode selecting

means determines whether or not to execute the joint copy mode operation.

Claim 7 (Original) In an image forming system comprising a plurality of image

forming apparatuses, said plurality of image forming apparatuses each comprising:

Inventor: Kiyotaka MOTEKI

a reading device for reading a document;

a printing device for printing an image read by said reading device;

a joint operation device for transferring the image read by said reading device to

another image forming apparatus and causing said another image forming apparatus to print

said image;

a joint copy mode selecting device for commanding said joint operation device to

execute a joint copy mode operation;

a registering device for allowing an operator to register a user stamp to be combined

with the image read by said reading device in the event of printing;

a combining device for combining the user stamp and the image read by said reading

device; and

a decision device for determining whether or not the user stamp is registered at the

another image forming apparatus to which said joint operation device has transferred the

image;

wherein when the joint copy mode operation is selected and if the user stamp is

registered at the another image forming apparatus, as determined by said decision device,

said joint operation device executes the joint copy mode operation.

Claim 8 (Original) The system as claimed in claim 7, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

forming apparatus, as determined by said decision device, said joint copy mode selecting

device determines whether or not to execute the joint copy mode operation.

Claim 9 (Original) The system as claimed in claim 7, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

Inventor: Kiyotaka MOTEKI

forming apparatus, as determined by said decision device, said joint operation device

transfers the user stamp to the another image forming apparatus and then executes the joint

copy mode operation.

Claim 10 (Original) The system as claimed in claim 9, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

forming apparatus, as determined by said decision device, said joint copy mode selecting

device determines whether or not to execute the joint copy mode operation.

Claim 11 (Original) The system as claimed in claim 9, wherein the another image

forming apparatus deletes the user stamp transferred thereto on completing the joint copy

mode operation.

Claim 12 (Original) The system as claimed in claim 11, wherein when the joint copy

mode operation is selected, but if the user stamp is not registered at the another image

forming apparatus, as determined by said decision device, said joint copy mode selecting

device determines whether or not to execute the joint copy mode operation.
